

We provide more than an AED cabinet that plays videos. The **AED SMART® STATION** is designed to be an intelligent component in your AED program.

Smart Cabinets' AED SMART® STATION presents short videos, approximately 2 minutes in length, to teach people how to perform CPR and use an AED. This is great for initial awareness training and regular refreshers. We know that AED programs work better if people (Bystanders) are trained and not afraid to get involved. Our videos are viewed right on the cabinet when people have "time to wait" in locations like airports, schools, community centres, sports and training centres, shopping malls and businesses.

WIFI Benefits

With connectivity, our solution becomes extremely flexible. You can gather usage statistics, change videos, add new messages and commercials as you like. When any new content is loaded into your account on our server, the system will **automatically update your cabinet(s)** at the end of the day.

We can:

- ✓ Update training videos as standards change
- ✓ Add messages from program organizers
- ✓ Introduce promotional messages from sponsors or donors to help pay for your program
- ✓ Add additional topics such as disaster preparedness, seasonal info, or health/safety messages
- ✓ Present 'How to use' Epi-pens, Fire Extinguishers and Narcan or other tools
- ✓ Modify the schedule for when the screen turns on and off for each day of the week
- ✓ Add content in different languages

System use metrics

It's valuable to know how many people are watching the videos and being trained. Our system delivers AED Program Metrics reports for the Client and Distributor showing:

- ✓ How many people watch each video every day
- ✓ Answers received to all video surveys
- ✓ Expiry dates for the AED Batteries, electrodes, epi-pen and fire extinguisher

Our Server network provides a secure link to your cabinets.

Remember our videos can be customized to display your logo!

Installation is Easy

Plug it in. Turn it on. Connect to your WiFi and you are up and running. If you have no WiFi – don't worry! The **AED SMART® STATION** comes pre-loaded, ready for use. An AED SMART® STATION can even connect to a hotspot and request updates, if required.

TRAIN YOUR COMMUNITY!
